Cupcake Order App

The **Cupcake Order App** is a simple Android application that demonstrates an order workflow for cupcakes. Users can select the quantity of cupcakes, choose a flavor, and specify a pickup date. Once the selections are completed, the application displays a summary of the order and allows users to share the order details with other apps.

Features

- Select the **number of cupcakes** to order
- Choose from different **cupcake flavors**
- Pick a **preferred pickup date**
- View a detailed **order summary**
- **Share order information** with other applications (such as email or messaging apps)

Prerequisites

Before running this project, make sure you have the following:

- Basic knowledge of **Kotlin**
- Familiarity with **Android Studio**
- Understanding of **Jetpack Compose and composable functions**

Getting Started

Follow these steps to run the project locally:

1. Install **Android Studio** if it is not already installed.
2. Download or clone the project repository.
3. Open **Android Studio** and import the project.
4. Build and run the application on an **Android emulator** or a **physical device**.

Technologies Used

- **Kotlin**
- **Android Studio**
- **Jetpack Compose**

- 
Cupcake Ordering Application

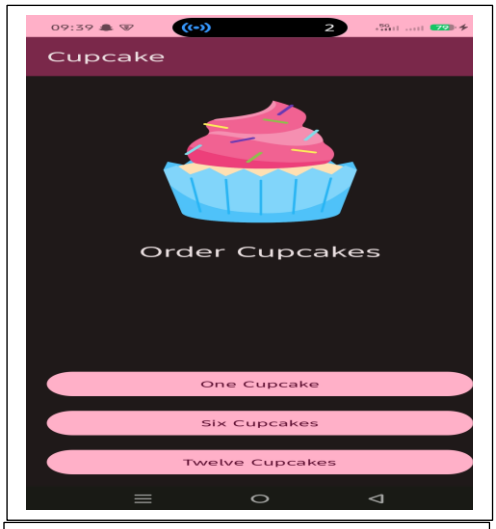
The **Cupcake Ordering Application** is an Android project that illustrates a simple cupcake ordering process. The app allows users to choose the number of cupcakes they want, select a flavor, and set a pickup date. After completing these steps, a summary screen displays the order details. Users can also share their order information through other apps such as messaging or email.

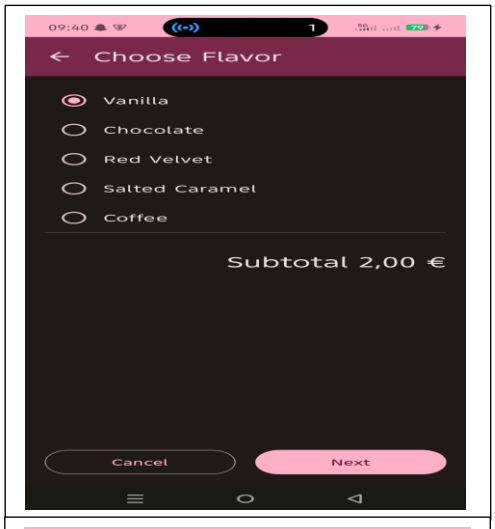
Requirements

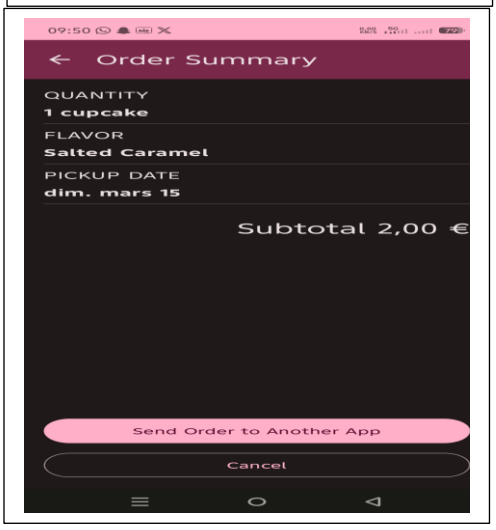
Before working with this project, you should have:

- Basic understanding of **Kotlin programming**
- Knowledge of how to **create and run Android projects in Android Studio**
- Familiarity with **Jetpack Compose and composable functions**

Getting Started

To run this project on your computer, follow these steps:






1. **Install Android Studio** if it is not already installed on your system.
2. **Download the project files** from the repository.
3. **Open Android Studio and import the project**.
4. **Build and run the application** using an Android emulator or a physical device.
